Education

POSTECH (Pohang University of Science and Technology) Feb. 2025 – Feb. 2027 (Expected)
M.S. in Graduate School of Semiconductor Technology Pohang, South Korea

Laboratory: BEVIL (Broadband Electronics by Virtual Intelligence Lab)

Advisor: Prof. Byungsub Kim

- **Scholarship:** Recipient of the Graduate School Entrance Scholarship.
- **Core Research:** AI-driven EDA: Automated Analog Layout Generation and RL-based Circuit Optimization.
- **Current Focus:** Layout design and automation for an RRAM-based compute-in-memory (CIM) macro.

Chung-Ang University (CAU) Mar. 2019 – Feb. 2025
B.S. in Electrical and Electronic Engineering Seoul, South Korea

- **GPA: 4.34 / 4.50 (Summa Cum Laude)**
- **Military Service:** Sergeant, ROK Army 702nd Special Commando Battalion. (2-years leave of absence)

Key Research & Projects

RRAM-based Compute-In-Memory (CIM) Macro Layout Design & Automation Aug 2026 – Present

Research Contributor

- Completed the custom layout of an SRAM-based RRAM emulation cell for the CIM array.
- Designing and automating the layouts of the RRAM driver circuits (BL, WL, and SL drivers).
- Planning integration with a current-mirror readout stage (replacing a TIA) to deliver voltages to the ADC, fine-tuning layouts through post-layout simulation.

CNN-based Layout Recognition for Generator Parameter Extraction Jul 2026 – Aug 2026

Onboarding Study / Framework & Training Codebase

- Studied a residual CNN framework that classifies cell types and regresses design parameters directly from layout data.
- Analyzed the model architecture and training code, including the use of standard and difference datasets for parameter estimation.

Samsung S.LSI CMOS Image Sensor (CIS) Layout Optimization May 2026 – Jul 2026

Project Collaborator / RL-based Layout Optimization

- Established a GitHub-based collaboration environment to support the research team's multi-contributor workflow.
- Configured an automated training pipeline on the lab server to enable reinforcement learning (RL)-based layout optimization.

Samsung AI Cluster Project 2025 – 2026

Lead Developer / DDI Layout Automation

- Engineered a GUI-based routing automation tool for Display Driver IC (DDI) layout, streamlining industrial design workflows.
- Utilized AI-native development environments (Claude Code) to accelerate software architecture design and algorithm prototyping.
- Implemented A* search algorithms to achieve robust automation in analog circuit design.

CTLE Optimization via Reinforcement Learning 2025

Research Contributor

- Contributed to a Python-based framework designed to automate Continuous-Time Linear Equalizer (CTLE) parameter tuning.

- Applied Actor-Critic algorithms to bridge the gap between complex analog behaviors and automated design flows.

Technical Skills

- **AI & Programming:** Python (PyTorch, NumPy, Pandas), Claude Code, C/C++, Git.
- **Design Tools:** Cadence Virtuoso (Custom IC Design/Layout).

Awards & Languages

- **Dean's Award (College of ICT Engineering):** 2024 CAU Engineering Academic Festival Dec. 2024
- **Academic Excellence Scholarship:** Chung-Ang University (Multiple-semester recipient)
- **Languages:** OPIc Advanced Low (AL) (Jan. 2026), NewTEPS 387 (Mar. 2024)

Extracurricular Activities

- **Music Production:** Singer-songwriter with proficiency in piano, guitar, and DAWs; passionate about MIDI composition as a lifelong hobby and aspiration.
- **Physical Fitness:** Maintains disciplined endurance through consistent weight training, running, and swimming.
